Founder, Seer9 | Scottsdale, AZ | asymbaevdastan@gmail.com | 832-819-8662 | seer9.com

FOUNDER EXPERIENCE

Seer9 | Founder | 2026 - Present

AI software that helps prediction market traders analyze a trade and predict the next outcome.

- Founded Seer9 after trading World Cup markets and building a tool to improve my own trading decisions. Launched it for other traders and am growing the user base.
- Lead the business and build the product, from choosing what to develop to writing the software, launching features, and bringing in users.
- Expanded from World Cup predictions into a broader tool for prediction market traders, bringing forecasts, live analysis, and market comparisons into one place.
- Connect live event data, market prices, and AI research with statistical models and simulations to estimate outcomes and update predictions as new information arrives.
- Building toward predictions of the next event during live action, showing traders how possible scenarios could change the outcome and the prices of related markets.

Vision: Make Seer9 the place traders turn before every trade: an AI system that connects events across markets, predicts what could happen next, and explains why the odds are changing.

ENGINEERING EXPERIENCE

Crunchtime | Backend Software Engineer | Aug 2024 - Present

- Build Java and Spring Boot services connecting restaurant operations with Workday, Paylocity, and Xero across payroll, workforce management, and accounts payable.
- Automated Paylocity employee synchronization and implemented Xero credit-note handling, translating operational requirements into working integrations.

Accenture Federal Services | Senior Software Engineer, Contract | Apr - Dec 2024

- Modernized Java services into Spring Boot applications and built REST APIs for data exchange across Department of Veterans Affairs systems.
- Refactored business logic, optimized database access, and resolved production defects in veteran-facing applications.

EDUCATION

North American University | BS in Computer Science | 2023 | GPA 3.6

SKILLS

Product strategy, competitive research, full-stack development, API integrations; Java, Spring Boot, JavaScript, React, SQL, AWS.
